Overview

The Customer Journey Analysis page displays a simple visualization of your campaigns and customer's paths in real-time. Utilize path analytics to drive higher conversion rates by finding the bottlenecks in your customer journey. Quickly identify customer behavior and optimize their experience along each step of your purchase paths.

Select a Landing Page for more detail, this will open the Path Analytics tab.

Path Analytics

The Path Analytics tab is consists of the 'Hierarchy Ladder' and the 'Journey Details' table.

Converted paths and Not Converted paths are ranked separately. This helps you understand the journeys that are performing well versus the ones that are not.

Journey Details

Paths Pages

* More than the selected top paths may appear below because some share the same rank - this is based on the total number of Sessions for each path and whether or not the path lead to a conversion.

1 to 10 (23) 10 / page Search... Export

Paths	Path Rank	# of Pages in Path	Journey Sessions	Journey Page Views	Onload	Avg Order Value (\$)	Orders	Revenue (\$)
Path 1	rank 1 (not converted)	2	322,194	835,354	2.97s	0.00	0	0
Path 2	rank 11 (not converted)	2	46,715	684,845	1.55s	0.00	0	0

The **Hierarchy Ladder** displays overall campaign performance at the top followed by campaign performance for traffic landing on the selected **Landing Page** in the bottom two rows. To select a different Landing Page, click the quick filter dropdown at the top of the page.

The **Journey Details** table offers either a page or path breakdown of your traffic. The Path tab shows the ways users navigated while visiting the site along with the metrics for the experience includes a Path Rank column. Clicking a path in this table will open the Path Analytics tab with that path selected. Under the Pages tab, this data is broken down by page reflecting the filter options selected for Paths, Landing Page, and Campaign. Use the quick filter drop down menus at the top of the page to change the filter selections for this table.

14 1 to 10 (20) 10 / page

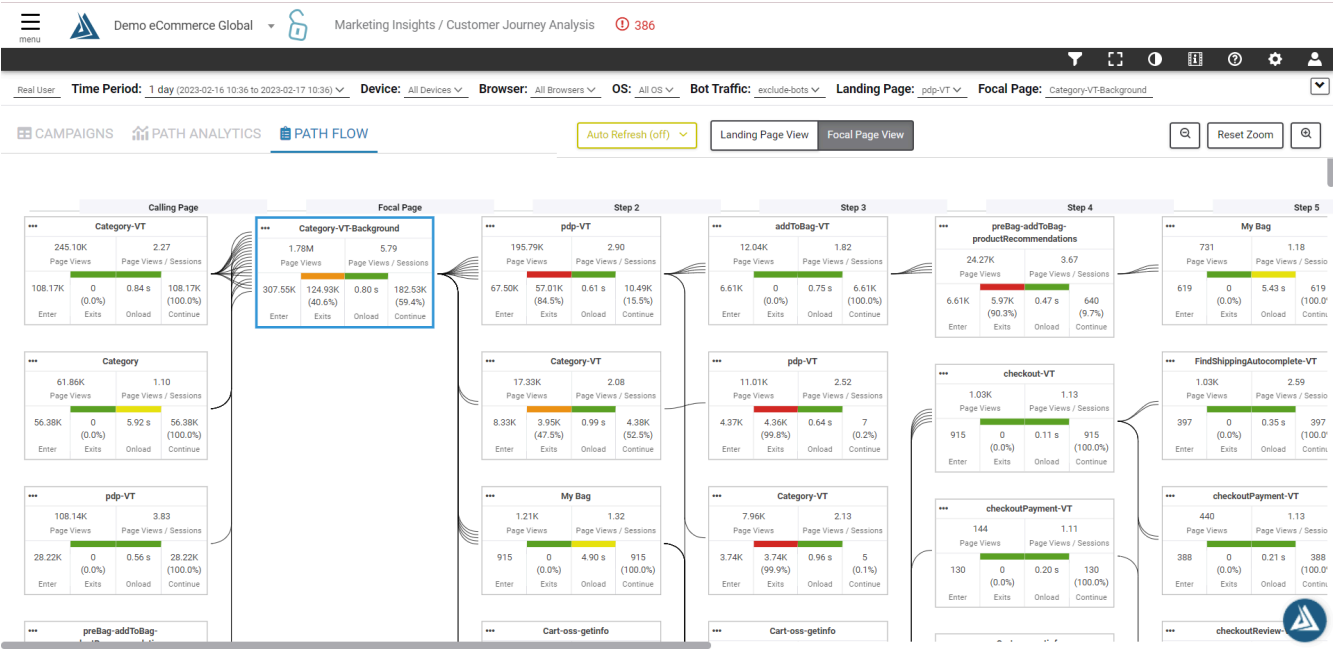

Path Flow

There are two different views within Path Flow, **Landing Page View** and **Focal Page View**. Select a page card in either view to highlight the user path associated with that page.

Landing Page View displays paths taken by users beginning from a site's landing page (selected in the filter options).

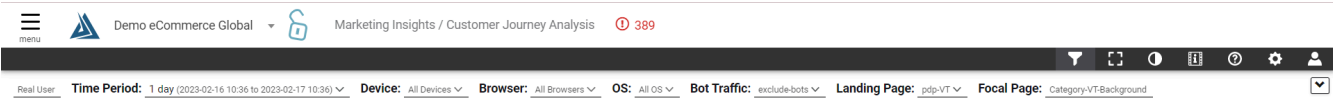

Focal Page View displays the paths taken by users specifically from the selected Focal page in Filters.

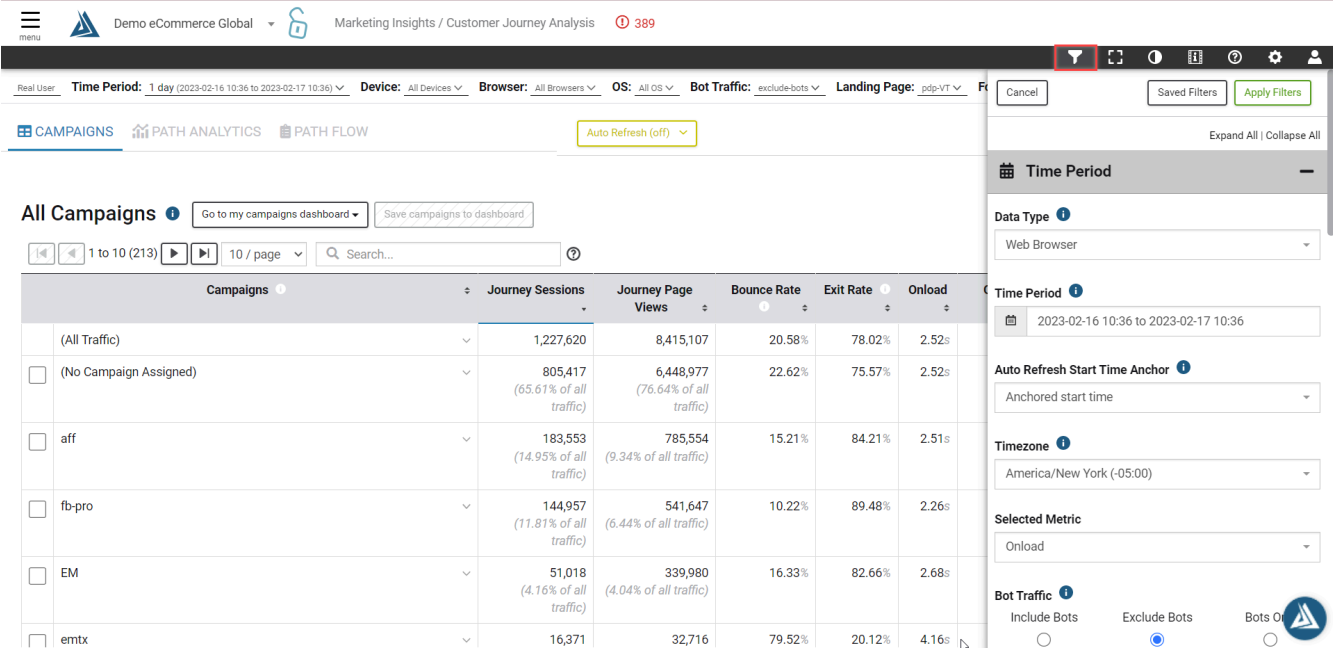

Filters

Use the quick filter bar the top for fast access to filters such as Time Period, Landing Page and Focal Page.

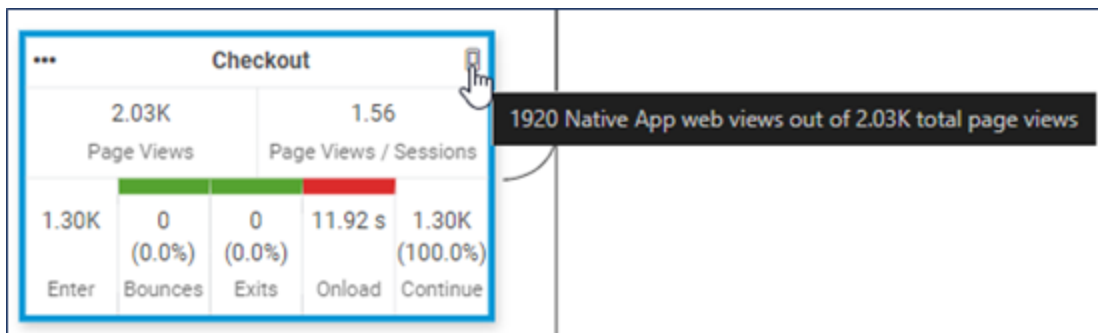

Click the filter icon at the top right of the page to open the full Filters menu.

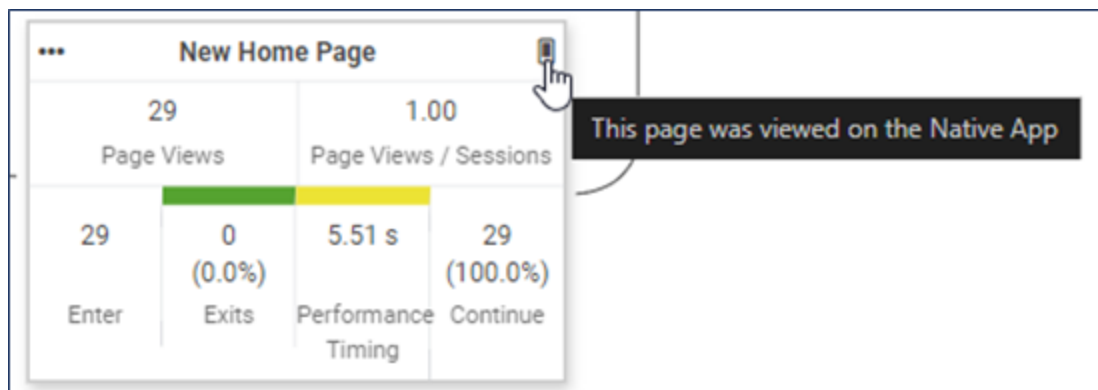

Special Considerations for Real User versus Native App Data Type

The first filter that is listed in the filters menu allows the user to select the Real User Data Type or the Native App Data Type. Because native webviews can exist within either of these data types, it is important to be able to see when this occurs.

When the Real User Data Type is set to Web Browser Data, there will be an indicator in the top right corner of the card when there are Native Webviews included in the count. By hovering over this icon, the user can see how many Native Webviews were counted:

When the Real User Data Type is set to Native App Data, there will be an indicator in the top right corner of the card when the page was a Native App Screen (and NOT a Native Webview). By hovering over this icon, the user can see a reminder that the card represents views that occurred on the app:
