### 1st vs 3rd Party Composition Widget

2024-05-02 00:00 to 2024-07-31 16:26, EDT (-04:00)

#### Domain Activity

|           |           |
|-----------|-----------|
| 16.3%     | 83.7%     |
| 1st Party | 3rd Party |
| 38.14 s   | 196.55 s  |

#### Element Count / Page

|              |              |
|--------------|--------------|
| 59.6%        | 40.4%        |
| 1st Party    | 3rd Party    |
| 2,168 / Page | 1,471 / Page |

This widget is available to be added to custom dashboards. For more information on custom dashboards, please visit [How to Create Custom Dashboards](#), and [Custom Dashboard Widgets](#).

## Overview

The 1st and 3rd Party Composition widget gives you a breakdown of the performance, size and amount of the content on your site. This widget is available for both Real User and Synthetic Data.

Note: 1st Party content is defined by the "First Party Domains" list in the site settings. All else is marked as 3rd Party.

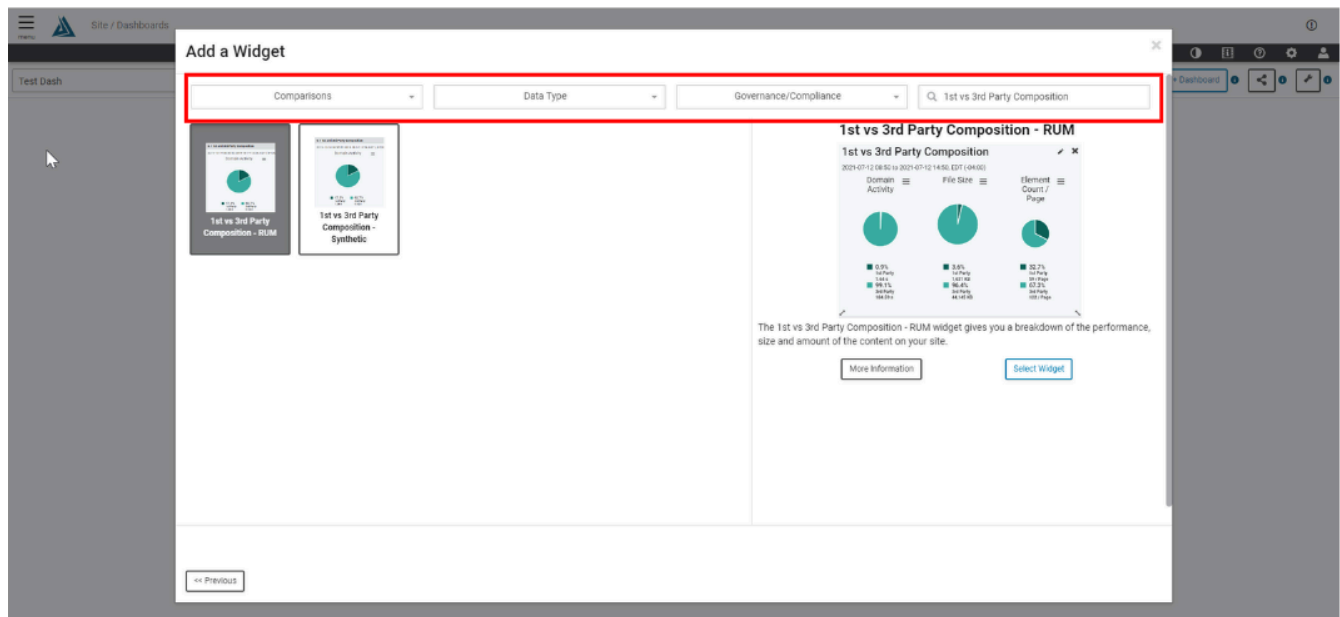

|                    |                                                                                                                                                                                                        |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Domain Activity    | The sum of the time content from a particular domain spent loading. In this context, it is the sum of time each of 1st and 3rd party domains spent loading, on average over the Dashboard Time Period. |
| File Size          | The sum of the file sizes from each of the 1st and 3rd Party content, on average over the Dashboard Time Period.                                                                                       |
| Element Count/Page | The number of elements of each of the 1st and 3rd party content, on average over the Dashboard Time Period.                                                                                            |

## Find Widget

Once you enter the Add a Widget menu, you will see a variety of filter options on top. One way to find the Network Health Checks Performance Widget is to use the filter options listed below.

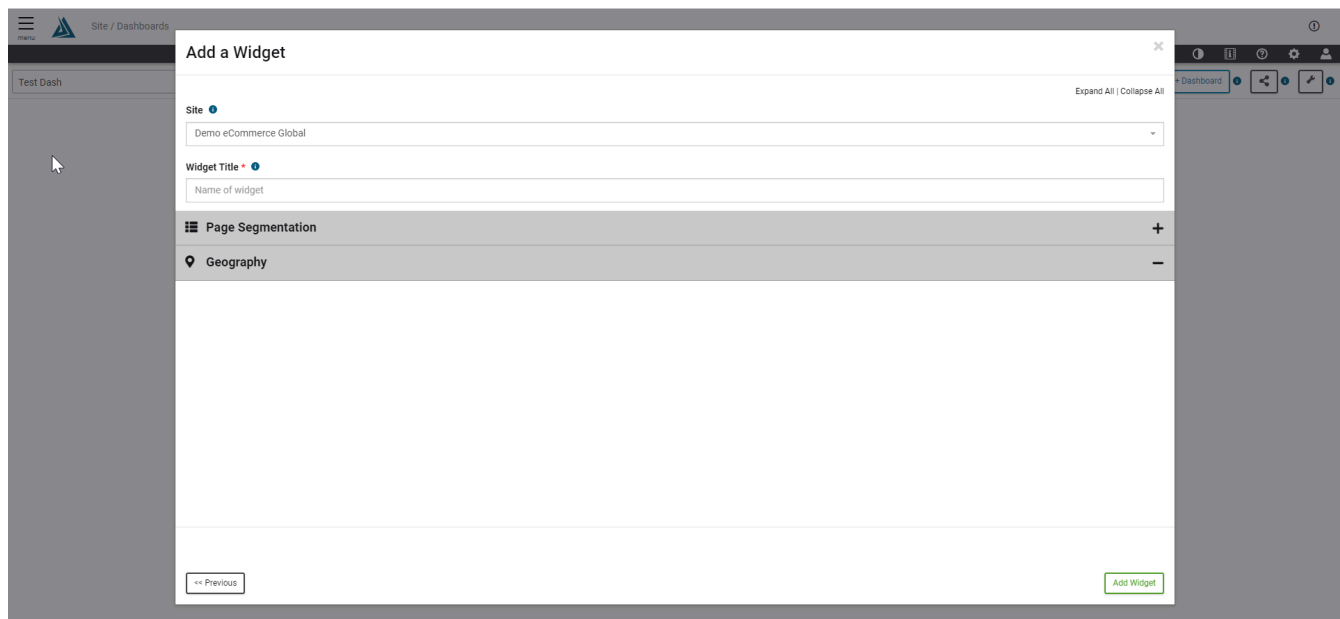

| Filter Title | Filter Option                 |
|--------------|-------------------------------|
| Widget Type  | Comparisons                   |
| Data Type    | Real User <i>OR</i> Synthetic |
| Insight Type | Governance/Compliance         |

Another way to find the Network Health Checks Performance Widget is to use the search bar at the top right of the menu.

## Widget Configuration

The only required configuration for this widget is a title. The Page Segmentation and Geography filters are also available in the configuration window, but can be applied after the widget is created as well.
