Overview

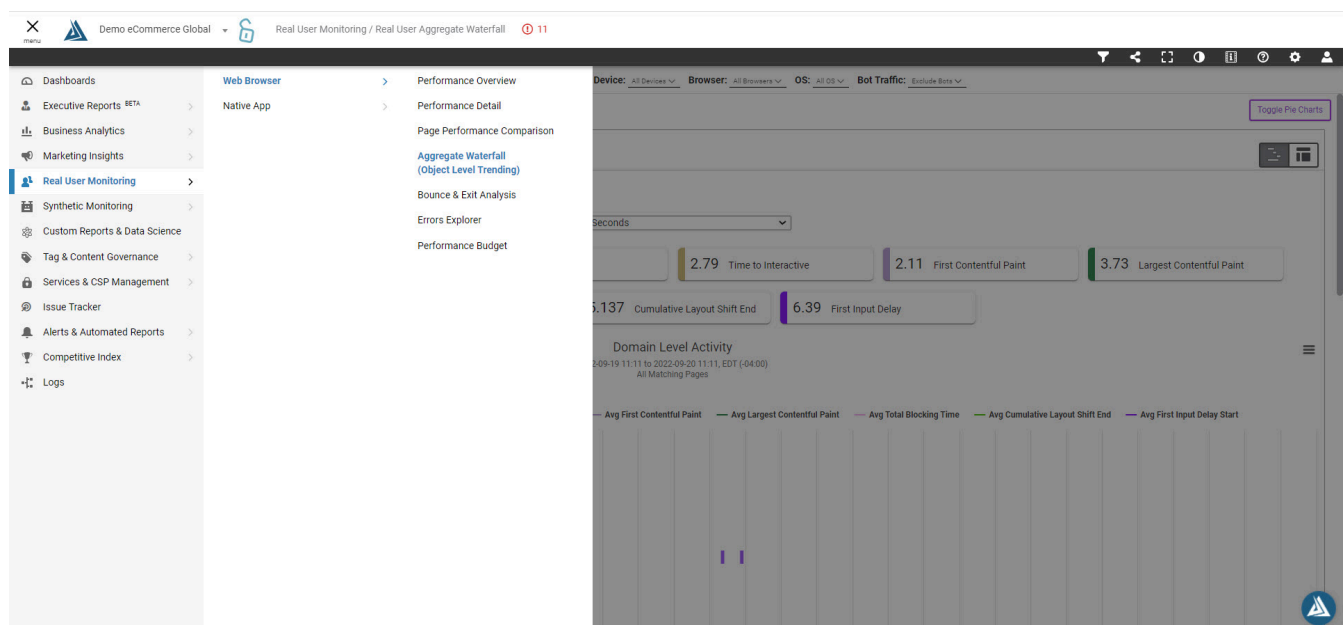

While the **Performance Detail Page** can show us the object and domain level detail for a single page measurement, the **Aggregate Waterfall Page** shows this data aggregated over time.

Note: This page has the same features and functionality as the Aggregate Waterfall page in Synthetic Monitoring.

How to Find the RUM Aggregate Waterfall Page

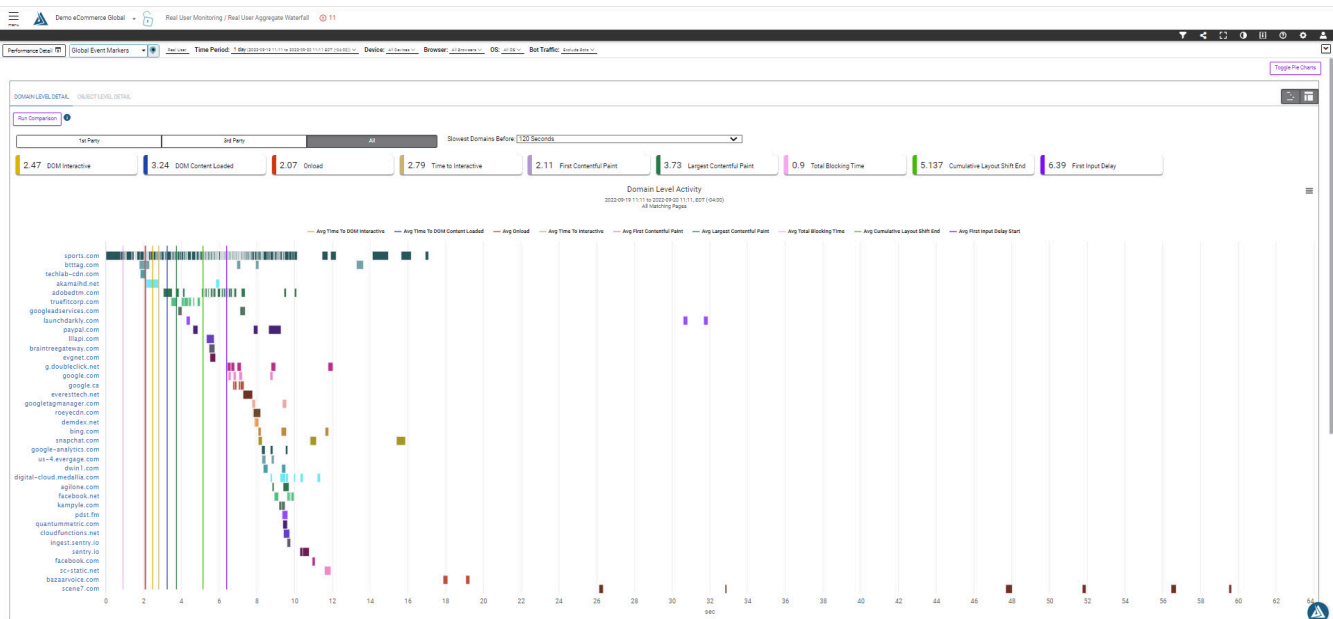

The RUM Aggregate Waterfall Page is accessible through the left side hamburger menu under the Real User Monitoring module, Web Browser, then Aggregate Waterfall (Object Level Trending).

How to Navigate the RUM Aggregate Waterfall Page

Domain Level Detail

The first thing on this page is the **Domain Level Activity Waterfall**. This graph is formatted as a waterfall, depicting the amount of time each domain was loading on average during the time period.

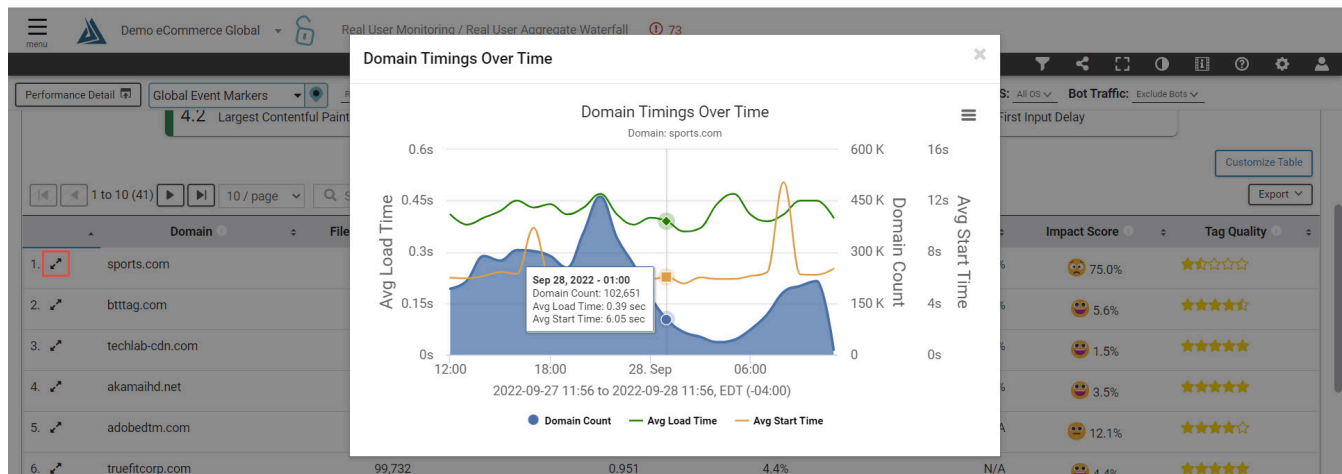

You can also view this data in a table format by toggling the graph and table icons on the right hand side. In the table view you will see % Impact, % of Onload Activity, Impact Score, and Tag Quality.

This is the breakdown for the Impact score:

- 50% < frown face
- 10-15% < neutral face < 50%
- Smile face < 10-15%

	Domain	File Count	Domain Activity (sec)	% of Impact	% of Onload Activity	Impact Score	Tag Quality
1.	sports.com	1,931,137	12.272	75.6%	100.0%	75.6%	☆☆☆☆☆
2.	btttag.com	93,256	1.287	7.9%	14.9%	7.9%	☆☆☆☆☆
3.	techlab-cdn.com	49,603	0.302	1.9%	12.3%	1.9%	☆☆☆☆☆
4.	akamaihd.net	4,663	0.859	5.3%	N/A	5.3%	☆☆☆☆☆
5.	adobeftm.com	628,276	2.658	16.4%	N/A	16.4%	☆☆☆☆☆
6.	trueftcorp.com	61,080	1.063	6.5%	N/A	6.5%	☆☆☆☆☆
7.	googleadservices.com	11,683	0.485	3.0%	N/A	3.0%	☆☆☆☆☆
8.	launchdarkly.com	86,306	0.659	4.1%	N/A	4.1%	☆☆☆☆☆
9.	paypal.com	8,432	1.145	7.1%	N/A	7.1%	☆☆☆☆☆
10.	illapi.com	17,399	0.408	2.5%	N/A	2.5%	☆☆☆☆☆

In the table view, you are able to open an expanded graph view of that domains timings over time through the icon on the left side of the table.

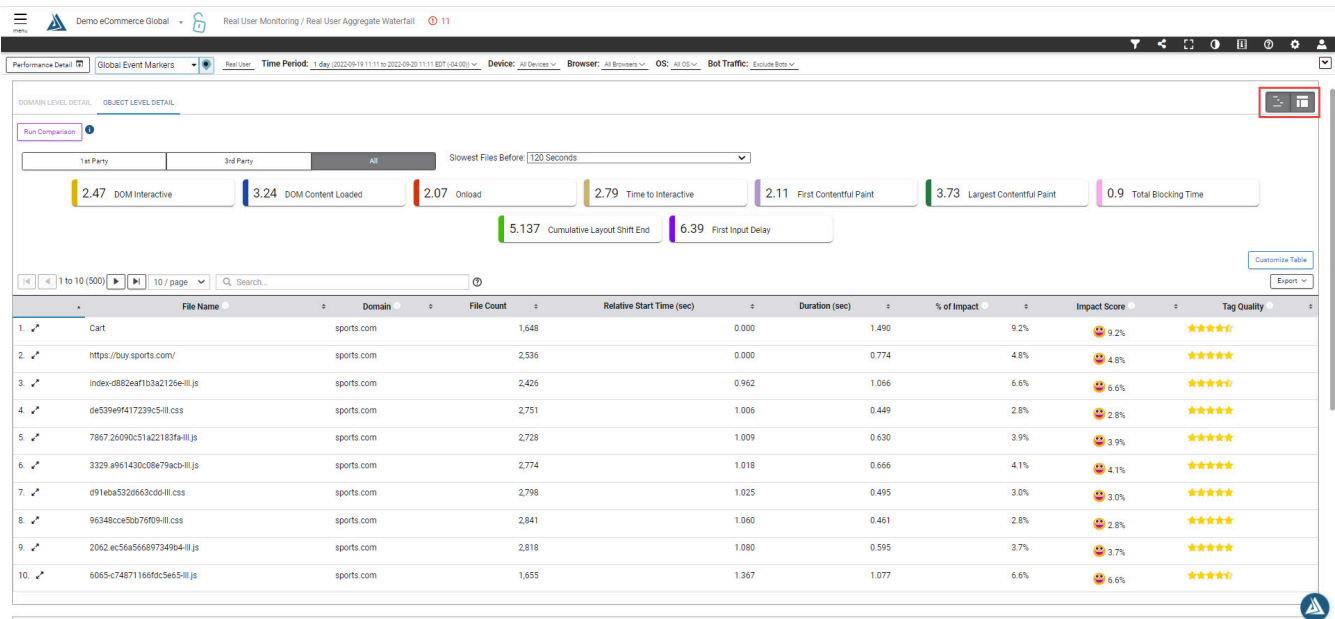

Object Level Detail

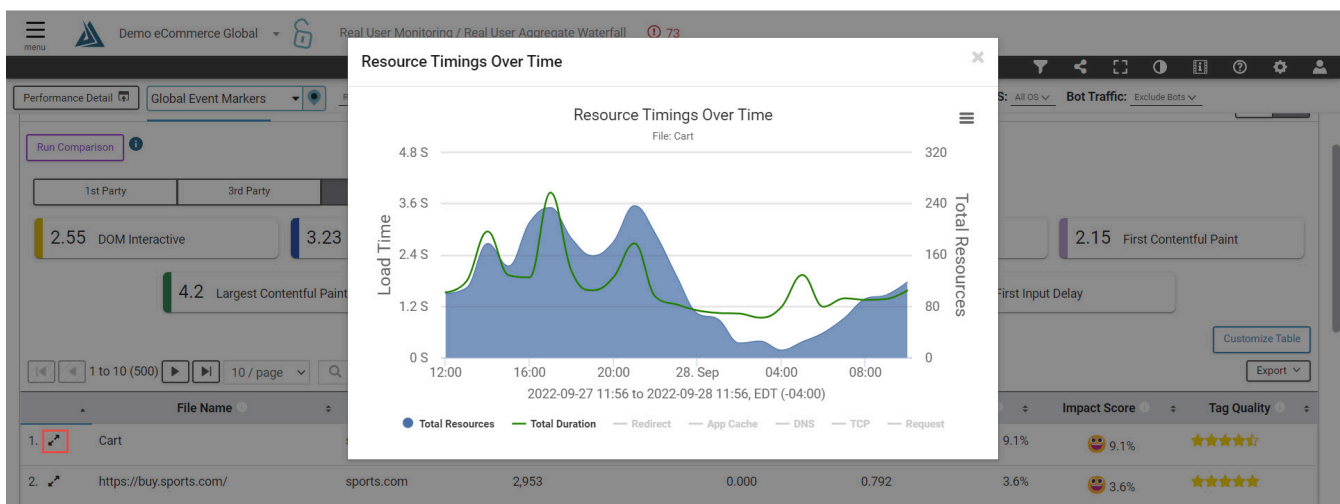

This waterfall displays the amount of time each object call spent loading, on average, during the selected time period. Switch between this graph and the **Domain Level Activity Waterfall** by clicking these tabs at the top of the page.

Toggle between the waterfall view and table view of this data using the icons indicated in the screenshot below.

In this view, you are able to open an expanded graph view of that resource timings over time through the icon on the left side of the table.

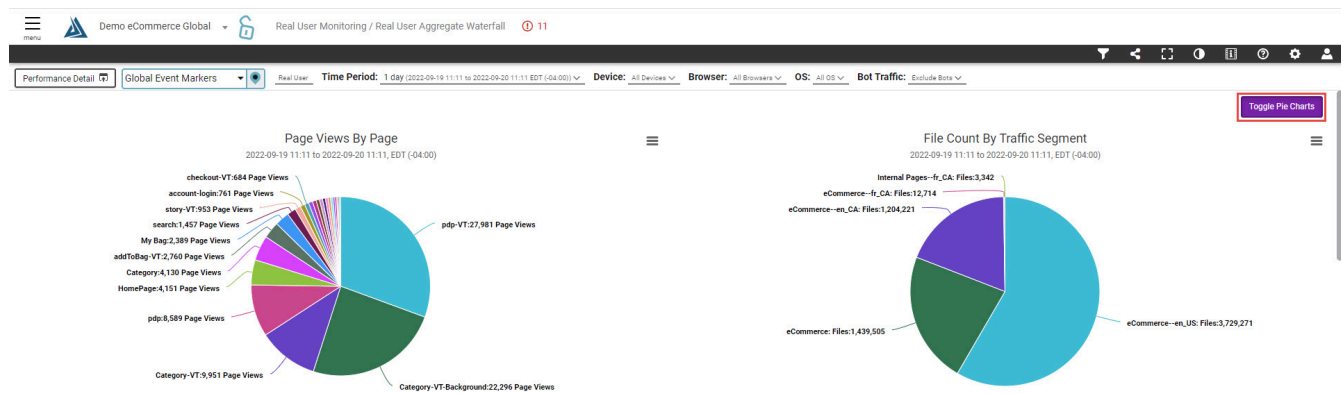

Resource Timings by File Table

At the bottom of the page is a table breaking down the resource timings by file. Here we can see which domain each resource belongs to, how many times this resource was observed (or element count), and more timing information.

Domain	File	Element Count	Duration (s)	Redirect (s)	App Cache (s)	DNS (s)	Request (s)
sentry.io	...https://sentry.io/api/230033/envelope/	246,703	0.20	0.00	0.00	0.00	0.00
us-4.evergage.com	northamerica	112,873	0.20	0.00	0.00	0.01	0.14
facebook.com	...https://www.facebook.com/t/	111,389	0.15	0.00	0.00	0.00	0.00
google.com	collect	105,720	0.15	0.00	0.00	0.00	0.00
sports.com	delivery	89,914	0.35	0.00	0.00	0.00	0.34

Pie Charts

To toggle the pie charts click the button at the top right of the page.

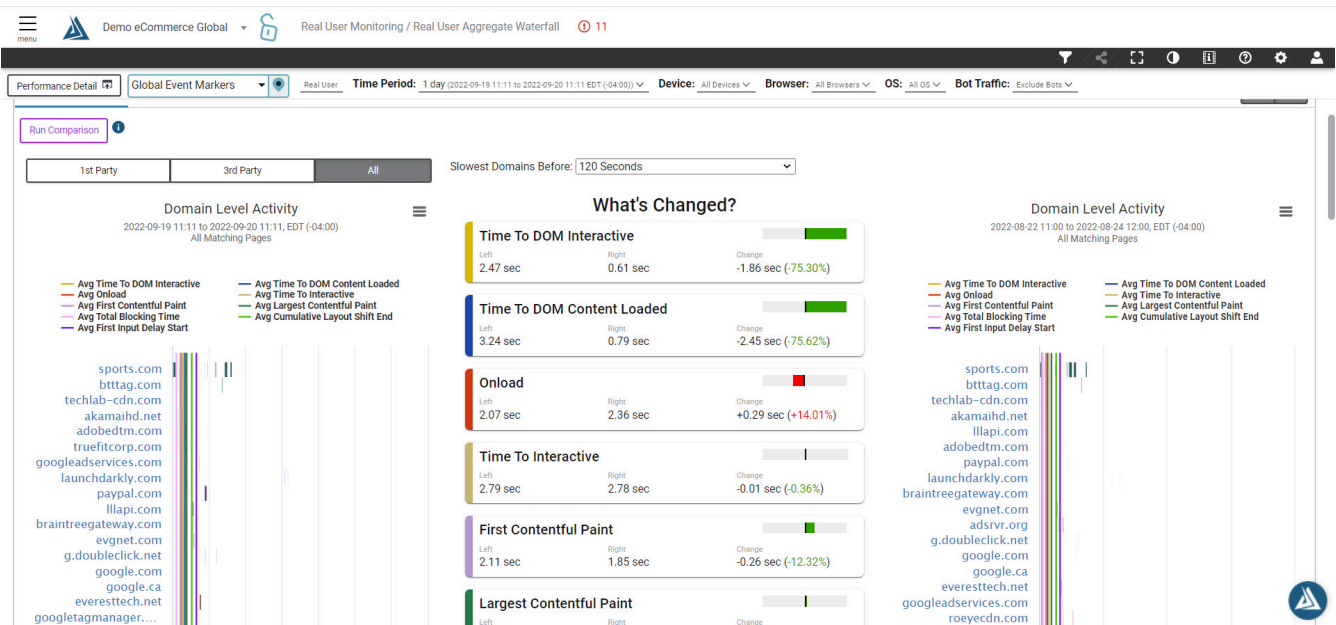

Running Comparisons

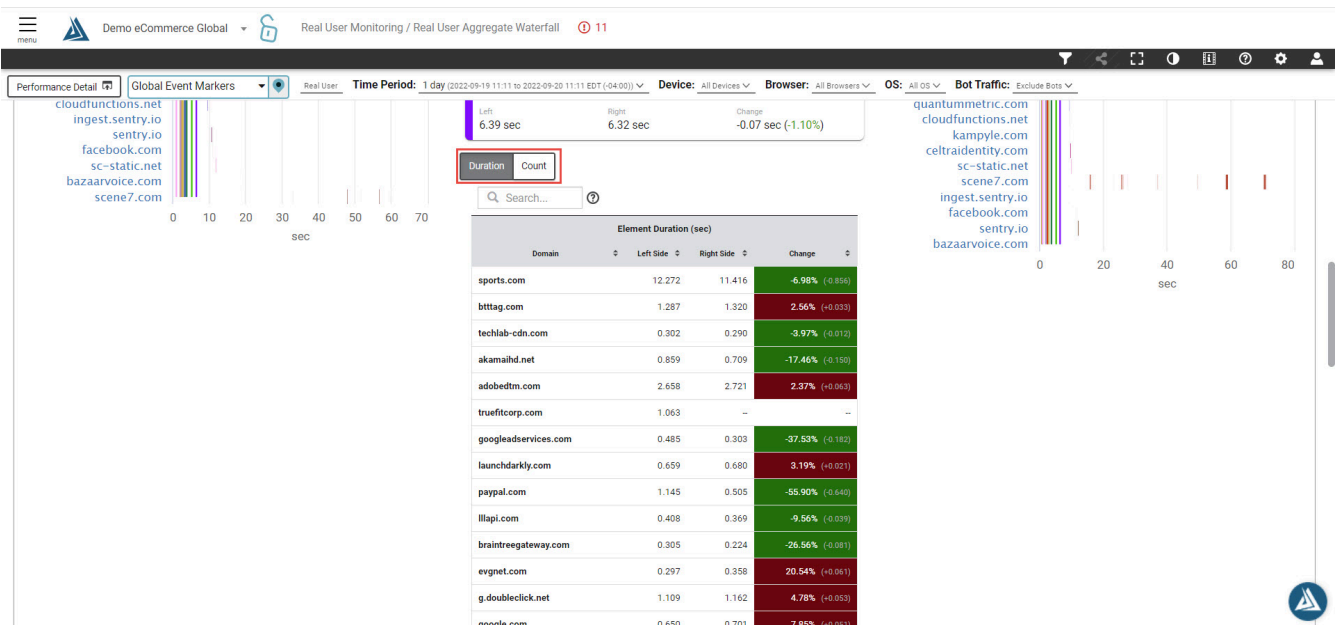

Back at the top of the page, there is a “Run Comparison” button. This allows you to compare two different waterfalls using the filter options in the menu. To do this, click the button and change the desired filter options for comparison which will be comparing against the data already on the page.

The screenshot shows the 'Real User Aggregate Waterfall' page with the 'Run Comparison' button highlighted in a red box. The page displays a detailed view of a file waterfall. At the top, there's a navigation bar with 'Performance Detail', 'Global Event Markers', and 'Real User' tabs. Below this, a filter bar shows 'Time Period: 1 day (2022-09-19 11:11 to 2022-09-20 11:11 EDT (-04:00))', 'Device: All Devices', 'Browser: All Browsers', 'OS: All OS', and 'Bot Traffic: Exclude Bots'. The main content area shows a detailed view of a file waterfall. At the top, there's a 'Run Comparison' button. Below it, there's a table of file names, domains, file counts, relative start times, durations, and percentages of impact. The table has columns for 'File Name', 'Domain', 'File Count', 'Relative Start Time (sec)', 'Duration (sec)', and '% of Impact'. The table lists three files: 'Cart' (sports.com, 1,648 files, 0.000 sec, 1.490 sec, 0.774%), 'https://buy.sports.com/' (sports.com, 2,536 files, 0.000 sec, 0.774%), and 'index-d882eaf1b3a2126e-III.js' (sports.com, 2,426 files, 0.962 sec, 1.066%). On the right, there's a sidebar with filter options for 'Time Period', 'Timezone', 'Marketing', 'Traffic Source / Referrer', 'Traffic Medium', and 'Campaign Name'. The 'Time Period' filter is set to '2022-09-19 11:11 to 2022-09-20 11:11'. The 'Timezone' filter is set to 'America/New York (-05:00)'. The 'Marketing' filter is set to 'No Filter Applied'. The 'Traffic Source / Referrer' filter is set to 'No Filter Applied'. The 'Traffic Medium' filter is set to 'No Filter Applied'. The 'Campaign Name' filter is set to 'No Filter Applied'.

Once filtering selections are ready, click **Apply Filters for Comparison**. The comparison graph will load to the right. We also see a summary in the middle showing **What's Changed**.

Below are two tables, one showing the duration for each item and the other showing the element count for each item. Toggle these tables with the button indicated in the screenshot below.
